

IMDB Movie Analysis

You are required to provide a detailed report for the below data record mentioning the answers of the questions that follows:

- A. **Cleaning the data::** PThis is one of the most important step to perform before moving forward with the analysis. Use your knowledge learned till now to do this. (Dropping columns, removing null values, etc.)

Your task: Clean the data

Step1: removing duplicate values

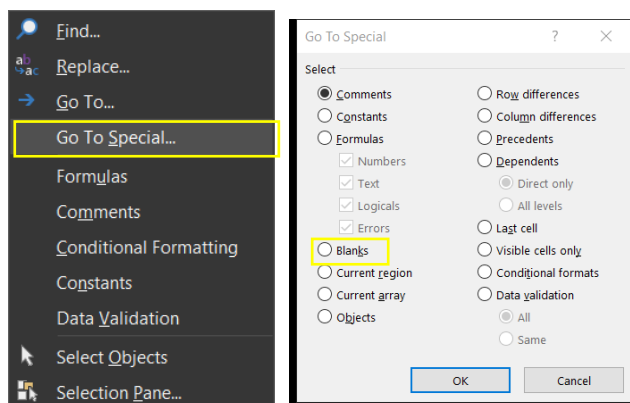

There is a considerable probability that it might unintentionally duplicate the data without the user's knowledge. In such scenarios, you can eliminate duplicate values.

To eliminate the duplicate data, you need to select the data option in the toolbar, and in the Data Tools ribbon, select the "Remove Duplicates" option.

Step2: Removing Null values

Click Find and select after selecting the whole dataset

Select Go To Special and click blank

When all the blank cells in the dataset get selected click Delete to remove all null cells

- B. **Movies with highest profit:** Create a new column called profit which contains the difference of the two columns: gross and budget. Sort the column using the profit column as reference. Plot profit (y-axis) vs budget (x- axis) and observe the outliers using the appropriate chart type.

Your task: Find the movies with the highest profit?

Movie with highest profit is: Avatar with 523505847 profit

Scatter Plot to analyse the outliers:

Interquartile range: $IQR = Q3 - Q1 = \text{QUARTILE}(W2:W4512, 3) - \text{QUARTILE}(AC2:AC4512, 1) = 54691852$

- C. **Top 250:** Create a new column IMDb_Top_250 and store the top 250 movies with the highest IMDb Rating (corresponding to the column: imdb_score). Also make sure that for all of these movies, the num_voted_users is greater than 25,000. Also add a Rank column containing the values 1 to 250 indicating the ranks of the corresponding films.

Extract all the movies in the IMDb_Top_250 column which are not in the English language and store them in a new column named Top_Foreign_Lang_Film. You can use your own imagination also!

Your task: Find IMDB Top 250

This task can be achieved by adding pivot tables

- F. **Charts:** Create three new columns namely, Meryl_Streep, Leo_Caprio, and Brad_Pitt which contain the movies in which the actors: 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' are the lead actors. Use only the actor_1_name column for extraction. Also, make sure that you use the names 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' for the said extraction.

Append the rows of all these columns and store them in a new column named Combined.

Group the combined column using the actor_1_name column.

Find the mean of the num_critic_for_reviews and num_users_for_review and identify the actors which have the highest mean.

Observe the change in number of voted users over decades using a bar chart. Create a column called decade which represents the decade to which every movie belongs to. For example, the title_year year 1923, 1925 should be stored as 1920s. Sort the column based on the column decade, group it by decade and find the sum of users voted in each decade. Store this in a new data frame called df_by_decade.

Your task: Find the critic-favorite and audience-favorite actors

	Column Labels
